BROWSER AHA QUICKSTART

Four AI tools already in your browser: ChatGPT, Claude, Gemini, and Microsoft Copilot

THE SIX STEPS

1 **PICK ONE OR MORE TO START WITH.** ChatGPT installs from inside the ChatGPT app (Settings, Computer Use, Install). Claude installs from claude.com/chrome. Gemini and Copilot need no install, they're built into Chrome and Edge.

2 **TURN IT ON.** ChatGPT: sign in and open the side panel. Claude: sign in, then also enable it in the Claude app (Settings, Connectors, Claude in Chrome, Configure). Gemini: click "Ask Gemini" in Chrome. Copilot: click its icon in Edge and sign in.

3 **GIVE IT A REAL JOB.** Open two or more tabs you actually want help with (venue quotes, proposals) and ask your tool to compare them.

4 **KNOW THE PERSONALITIES.** ChatGPT asks permission per site. Claude starts in Automatically approve, backed by a safety check. Gemini mostly answers unless you turn on Auto Browse. Copilot mostly answers, summarizes, and compares.

5 **LET IT ACT, SMALL.** If you want it to act, not just read, try one small task where that's available (a form fill, a short click-through) and review before anything sends or submits.

6 **DO THE FUN PART.** Show somebody, any of the four, and watch their face when it reads their tabs back to them correctly.

GET THE REAL ONES, NOT A LOOKALIKE

The extension stores are genuinely full of fakes using these names.

- **ChatGPT:** install from inside the ChatGPT app (Settings > Computer Use > Install). OpenAI does not publish a public store link on purpose.
- **Claude in Chrome:** claude.com/chrome, Anthropic's own page.
- **Gemini:** support.google.com/gemini/answer/16283624, Google's own Help Center article.
- **Microsoft Copilot:** explore.microsoft.com/edge/copilot-mode, Microsoft's own product page.

BEFORE YOU LET ANY OF THEM CLICK AROUND

- **Not all the same:** ChatGPT asks before every new site. Claude starts in Automatically approve, backed by a safety check. Gemini mostly answers unless Auto Browse is on. Copilot mostly reads and drafts.
- **Close sensitive tabs first.** All four can read whatever is on the page you're testing with.
- **Review before anything sends.** For tools that can act, you see it before it submits. Use that review every time.

WHAT TO KNOW

- **ChatGPT:** capability upgraded (not new) on Oct 15, 2026. Free to try, Work-mode actions depend on plan.
- **Claude in Chrome:** on every paid plan since Dec 2025, autonomous by default since Aug 26, 2026.
- **Gemini:** built into Chrome, no install. Auto Browse needs a Pro or Ultra plan.
- **Microsoft Copilot:** built into Edge, no install. No documented autonomous action yet.
